

What About Ultraviolet Rays?

There's no need to worry about ultraviolet rays with Aqualon®.

There's no need to worry. Aqualon is resistant to damaging ultraviolet rays, most petroleum products and a wide range of acid and alkaline liquids.

You deserve a product like Aqualon®

Aqualon is used on folding camping trailers, soft-sided truck campers, Antigua®, Travel Star®, XP and Star Stream® expandable travel trailers.

Aqualon is manufactured by the Graniteville Company of Graniteville, South Carolina, the same folks that brought you permanent press for your clothes! Aqualon is distributed by the Astrup Company of Cleveland, Ohio, the only distributor of Aqualon in the world. Aqualon has a 7-year warranty against material defects and workmanship.

Seeing is believing. For more on Aqualon, contact the Starcraft dealer nearest you.

What Makes Aqualon® Tent Fabric So Durable?

What Is Aqualon® Tent Fabric?

Unlike laminated vinyls, Aqualon® won't separate, crack or peel.

Aqualon is a two-ply, textured polyester duck, coated with a pigmented vinyl resin. Unlike laminated vinyls, Aqualon won't separate, crack or peel. It's unbelievably water resistant and passes FMVSS 302 (Federal Motor Vehicle Safety Standards) fire retardant requirements.

Is It Strong?

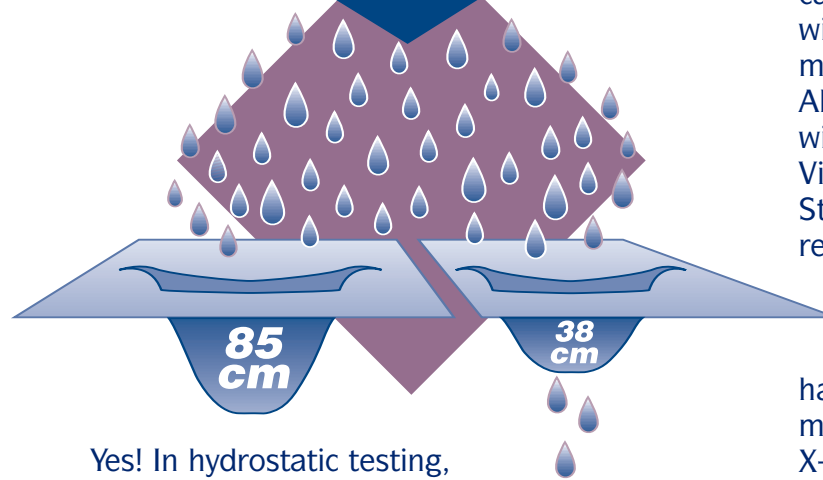

Aqualon® has an extremely high tensile strength of 420x330 pounds of force to tear the fabric in any direction. This is twice the tensile strength of other fabrics used in folding camping trailers. Aqualon has excellent stability, which means it won't stretch or shrink!

Strong and durable! Aqualon has an extremely high tensile strength of 420x330 pounds of force to tear the fabric in either direction. This is twice the tensile strength of other fabrics used in folding camping trailers.

Aqualon has excellent dimensional stability, which means it won't stretch or shrink! It remains pliable in all temperatures, so your tent assembly will fit the same every time you set it up, regardless of weather conditions. Aqualon is also abrasion resistant; pin holes are virtually a thing of the past.

Is It Water Repellent?

In hydrostatic testing Aqualon® had no leakage at 85 cm of water. By contrast, Sunbrella 302 began leaking at 38cm of water.

Yes! In hydrostatic testing, Aqualon had no leakage at 85cm of water. By contrast, Sunbrella 302

began leaking at 38cm of water. You'll stay dry in a tent assembly made of Aqualon, which was originally developed for the marine industry, the best testing ground for water repellency in the world!

How Do You Clean Aqualon®?

Aqualon can be cleaned with anything from mild soap and water to Clorox bleach. All commercial utility or vinyl cleaners will also work. We recommend Apco Vinyl Clean, available from your Starcraft dealer. Aqualon is mildew resistant, but keep in mind, mildew grows on dirt and dampness. So keep your tent assembly cleaned and dried before storing. If mildew has developed because of dirt or moisture, it can be removed with Tilex, X-14 or a diluted mixture of Clorox and water. Aqualon is colorfast and won't fade or bleed. The color will not rub off.
